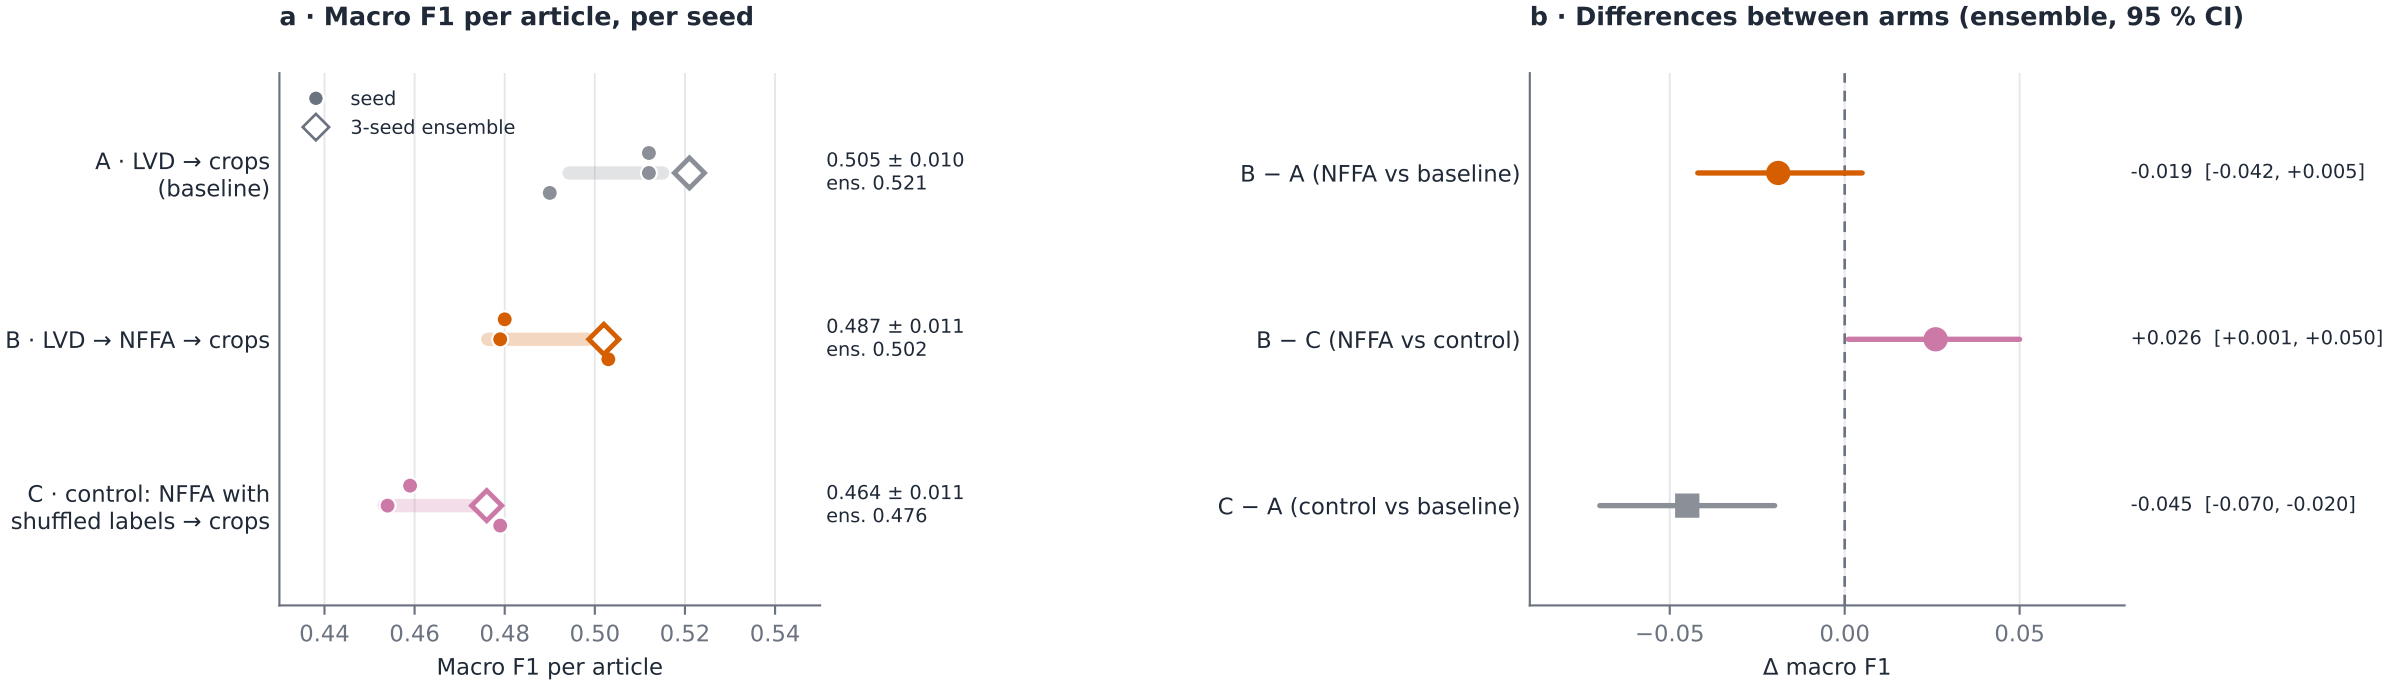
Figure 3 · Pre-training on NFFA-EUROPE before fine-tuning on our crops (DINOv2)



1,114 articles; article-level 5-fold; 3 seeds per arm; stage 1 (NFFA, 7 morphologies, 8,204 tiles, 96.8 % internal accuracy) ran once. 95 % CI by article bootstrap (2,000) on seed-averaged probabilities.
Result: B does not beat A (CI includes 0); shuffling labels hurts (C − A). Source: modelos/comparacion/ANALISIS_06_NFFA.md. Criterion fixed before seeing results.
